

Turn the project into a WAR package :

1. Click the "File" -> "Project Structure" menu in the upper left corner to open the "Project Structure" window.
2. Select Artifacts to the left of the "Project Structure" page.
3. Click the "+" sign above the middle and select "Web Application: Archive" -> [Empty].
4. Change the name or location of unspecified WAR package under "+"
5. Click the "+" sign in the image above and select the "Directory Content" menu. This will bring up a pop-up box and select the main Directory for your web project.
6. Right-click your project on the right and select "Put into Output Root" to Put the project into the WAR package
7. After adding the corresponding directory, click the following [OK], close the Project Structure window, click the above menu bar [Build] ->, go to [Build Artifacts] -> and select your WAR package -> Build

Put the WAR package in Tomcat manually:

1. Copy the generated WAR package to your tomcat/webapps directory
2. Go to the bin folder under the Tomcat installation directory and click startup.bat to start Tomcat. At this time, Tomcat will automatically unzip the WAR package generation project and start the project
